

MODÉLISER UN ÉVÉNEMENT EN VALEUR

UNE VALEUR PROURSEMER LA DÉSOLATION: NUL

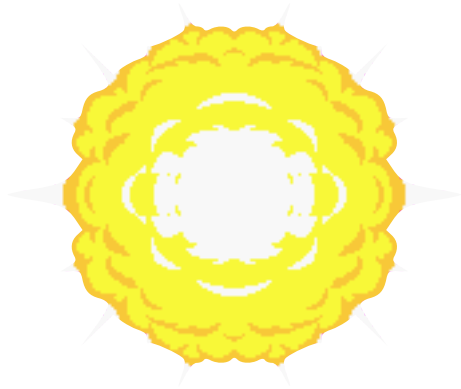

MAGNET 2-DUALS - THOUGHTS ARE

```
class Weapon {}
class Target {}
class Impacted{}

public class Main {
    static Weapon armYouBow = null;
    static Target targetMonster = null;
    static Impacted hitMonster(Weapon w, Target t) {
        return null;
    }
    public static void main(String[] args) {
        hitMonster(armYouBow, targetMonster).toString();
    }
}
```

OCaml, Rust, Haskell : null n'existe pas

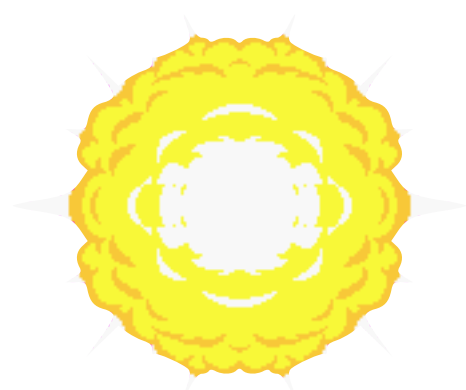

Kotlin, Swift, F# : n'autorisent null que si explicitement autorisé à la déclaration

```
Exception in thread "main" java.lang.NullPointerException
```

MODÉLISER UNE ABSENCE POTENTIELLE DE VALEUR

UNE VALEUR POUR SEMER LA DÉSOLATION : NULL

Exception in thread "main" java.lang.NullPointerException

```
class Weapon {}
class Target {}
