JSLIGO

HELLO WORLD

Langage de smart contrat inspiré par Typescript qui compile vers Michelson

JSLIGO

ANOTHER EXEMPLE: COUNTER

```
type t_storage = int
type result = [list<operation>, t_storage]

@entry
const add = (a, storage) : result => [list([]), storage + a];

@entry
const sub = (a, storage) : result => [list([]), storage - a];

@entry
const reset = (_ : unit, _storage : t_storage) : result => [list([]), 0];
```
