IMPLÉMENTATION NAÏVE EN TYPESCRIPT

```typescript
enum Direction {
  North,
  East,
  South,
  West
}

const label = (d : Direction) : string => {
  switch (d){
    case Direction.North: return "north";
    case Direction.South: return "south";
    case Direction.East: return "east";
    case Direction.West: return "west";
  }
}

console.log(label(1));
console.log(label(Direction.East));
console.log(label(Direction.South));
console.log(label(4));
```
