DEPUIS JAVA 5 : UTILISATION DES ENUM !

```java
enum Direction { North, East, South, West }

public class Main {
    public static final String label(Direction d) {
        switch (d) {
            case North : return "north";
            case East : return "east";
            case South : return "south";
            case West : return "west";
        }
        throw new IllegalArgumentException("not a valid direction");
    }

    public static void main(String args[]) {
      System.out.println(label(Direction.East));
    }
}
```
